September 28, 1966

MEMORANDUM FOR THE RECORD

SUBJECT: Visit to [redacted] with Par 243
Briefing Print Enlarger

1. On 15 and 16 September 1966 a visit was made to [redacted]
[redacted] for the purpose of a joint review of several
BPE assemblies and the release of these assemblies for multiple unit
fabrication on joint procurement contract [redacted] Task #4.

3. The meeting was convened at 1100 hours 14 September
excluded [redacted] personnel until after DIA, Navy, and USAF
representatives were briefed on the nature of this contract; this
included type of feed back we hoped to receive from them and the
degree of contract responsibility and administration assigned to
NPIC. An understanding of each agencies interest in this task having
been established, [redacted] representative entered and proceeded with a
review of the drawings and specifications of the assemblies proposed
for release. The party having reviewed the drawings, with some
comments and recommendations for minor improvements, then examined
the "breadboard printer" and the demonstration prints made thereon.
The following are suggested improvements which [redacted]
was happy to receive.

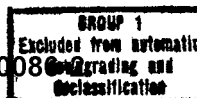

a. After Pulleys positions have been located with set
screws, they should be drilled and pinned.

b. The lock release on the film transport for hand
operation should have a stop to maintain its position.

c. All dust covers should have quick release fasteners to
provide convenience of servicing.

d. The casters, designed to protect the printer during any
time it is moved and to aid in physically locating the printer,
should be made captive so they can be left on the printer in a
non-operating position.

Declass Review by NGA.

CONFIDENTIAL

25X1 4. It was unanimously agreed that the assemblies shown in the attached memorandum NPIC/P&DS/D/6-1566 signed copy of which was left with [redacted] Royce would be released for multiple unit fabrication. Item (h) fractional horse power motors were included in this release, notwithstanding that some of the assemblies for which they are intended are not yet released. The reason for this action is that this is a critical item having a long lead time and there is little or no risk that there would be any change in these motors. The Navy representative [redacted] is to determine at an early date and let me know if they have any requirement for other than 60 cycle motors.

25X1 5. It is the opinion of [redacted] that the items released will keep [redacted] busy for several months and that it is unlikely that any more assemblies will be ready for review until around the first of 1967. It is the intent of the undersigned, however, to visit [redacted] again during November 1966 to determine the extent of progress on this project.
